Waikato Afterhours Veterinary Hospital

Monitoring Packages Available

***Critical Care 1: Cost to Owner \$280**

- This is designed for patients that have been stabilised.
- There will be an initial and final clinical assessment done by the Vet.
- Nursing care includes intravenous fluid therapy monitoring, administration of medications, feeding as required, urinary catheter flushing, 4 hourly TPR checks and pain assessment.

Please circle the following table to decide if your patient qualifies for this package:

Is there an IV in place?	yes	no*
Do you consider it unlikely that the patient will need Vet intervention overnight?	yes	no
Is the patient stable on maintenance or rehydration fluid rates?	yes	no
Have you provided all medications/fluids necessary for your patient overnight?	yes	no*

If you have answered **YES to ALL** the above questions, your patient can be admitted under our **critical care 1 package**.

*If you answered no to IV in place or providing medications/fluids, your patient can still be admitted under this package, but there will be additional costs if an IV catheter or fluids are required, and for any medications administered.

***Critical Care 2: Cost to Owner \$400**

- This is designed for unstable patients who require ongoing veterinary assessment of their clinical status and treatment/fluid plan. Veterinary intervention may be required in response to a changing clinical status.
- Treatment included: as for Critical Care 1, but in addition there will be blood pressure checks, ECG if indicated, 4 hourly PCV if requested and close Veterinary monitoring of treatment plan.
- Any further intervention would be at an additional cost eg. repeat bloodwork, imaging, oxygen therapy, *intensive* care, transfusions, anaesthesia, enemas, catheterisation, extra medications etc. These potential extra costs will be discussed with the owner upon admission.

We will endeavour to follow your requested treatment plan where possible, but of course unforeseen changes in the clinical status of the patient can occur with any overnight monitoring case. We will communicate with the owner if we feel we need to increase the level of care, or additional Vet intervention is required during your patients stay.

Please advise your clients that the monitoring package fee will be required as their deposit at the time of drop off to our clinic. Any additional charges will be finalised upon discharge with the owner.
